QP-ESD201 electrostatic Measuring device static field meter
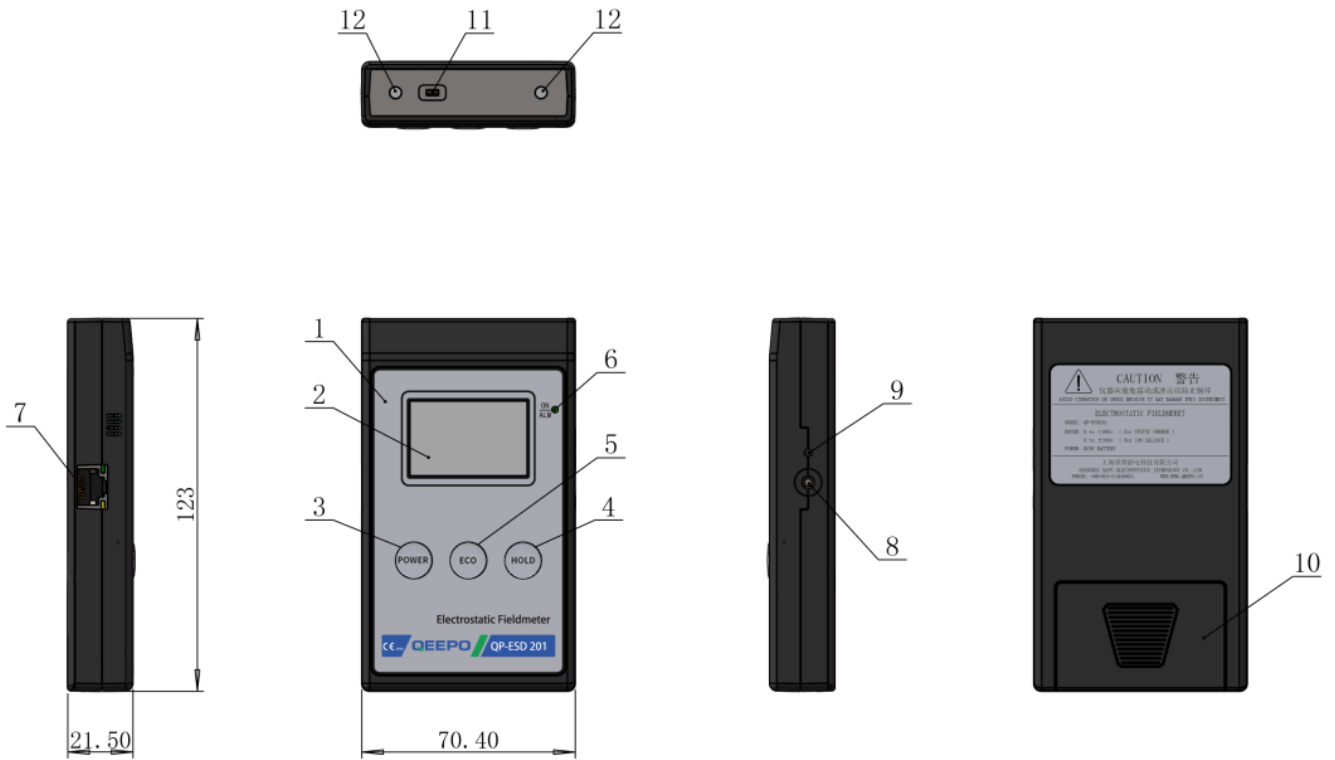

QP-ESD201 Electrostatic Measuring Device Static Field Meter

QP-ESD201 static meter is developed by Qipu electrostatic technology, which is specially used to detect static electricity.A new non-contact surface potential sensor is used in the tester,which can effectively detect the static electricity carried by objects, such as plastic, chemical fiber, fur andhuman body.The tester is simple to use and easy to carry. It is an indispensable measuring tool in the process of anti-static and electrostatic treatment.
